About us

BALSA TEAK BORAZO S.A.S. is an Ecuadorian company specializing in the industrial drying of balsa wood and the manufacture of high-quality glued blocks. We combine experience, controlled processes, and a firm commitment to excellence to offer reliable solutions that meet the needs of the domestic and international industries.

Our Services and Products

WOOD DRYING

The quality of our products begins with a carefully controlled drying process. We have 8 industrial drying chambers, where balsa wood is processed under conditions that promote uniform moisture reduction and the preservation of its properties.

Each batch undergoes a process of reception, sorting, and preparation prior to drying. Throughout the entire cycle, which lasts approximately 10 to 12 days, we conduct continuous moisture and quality checks to ensure that the material is reliable, uniform, and ready for the next stages of production.

FINISHED BALSA WOOD

Carefully selected balsa wood processed under strict quality controls, ensuring uniformity, stability, and excellent performance for industrial applications.

Density	90-130kg/m ³
Finish	4-sided brushing
Packaging	Unit / bundle
Labeling	OEM available

GLUED WOOD BLOCKS

Our glued blocks are made from carefully selected balsa wood that has been industrially dried and sorted by density.

Through controlled gluing and pressing processes, we produce a product with excellent dimensional stability, uniformity, and quality, designed to meet the requirements of industrial applications and composite materials.

DENSITY	90-150 kg/m3
BUOYANCY	High ($\geq 0.85 \text{ g/cm}^3$)
WEIGHT PER BLOCK	0.8 - 45 kg
ADHESIVE	PVA / Marine epoxy
